Senior Full Stack Software Developer

Hannover, Germany - Full Time

Your Job at ayeT-Studios

We are looking for an experienced full stack software developer to join our team. As part of the early-stage team you will work directly with the founders. This is your chance to significantly shape our codebase, infrastructure, and future - using PHP, Java, AWS and DynamoDB.

At the core of your position you will be working on algorithms managing the way ads are delivered to users, taking into consideration multiple data points like device data, ad environment, targeting, and user data - all in real time. Your main focus will be to optimize ad delivery to every individual user, reducing costs for advertisers, creating higher ad relevance and value for customers, and improve revenue implications for publishers. You will be using state of the art technology to handle big amounts of data as well as smart & self learning algorithms.

Like every other team member, you enjoy taking full responsibility for transforming ideas into rock-solid, well-engineered, scalable software.

What We Do

ayeT-Studios develops the next generation world-class mobile marketing platform, building monetization, engagement, analytics and discovery tools.

Our holistic platform approach connects app developers, marketers, device manufacturers, advertisers and publishers to achieve greater business success. Thus finding, enabling, understanding, engaging and monetizing their target audiences more effectively. Over 10.000 advertisers have been running campaigns on the ayeT-Studios platform already, more than 250 app developers use our monetization solutions and over 1.000.000 app installs are delivered monthly.

We believe that the quick evolving mobile advertising market with ad formats like in-app videos, interstitials, banners and offerwalls is just the beginning. We are eager to shape the future of mobile advertising and are looking for your support to make it happen.
